Profile Section

- **Full Stack Developer** with expertise in **JavaScript**, **TypeScript**, **React.js**, **Node.js**, and **Solidity**, specializing in building scalable web and decentralized applications (dApps).
- Hands-on experience in smart contract development and integration using **Web3.js**, **Ethers.js**, and **Hardhat**, with successful projects like **Bluedex (Uniswap clone)** and **Telegram-based swap/betting apps**.
- Proficient in creating responsive, high-performance UIs and implementing features like **staking**, **vesting**, **token deployment**, and **secure payments** using tools like **Paybroit**

Education

Meerut Institute of Technology

2019 - 2022

Bachelor of Computer Applications

Experience

Speqto Technologies Pvt. Ltd. Senior Software Engineer

May 2022 – Present

- Working on the end-to-end development of **decentralized finance (DeFi)** applications and Telegram-based blockchain tools from crafting scalable frontends to integrating secure **smart contracts** and **blockchain infrastructure**
- Led the full-stack development of **Bluedex**, a **Uniswap clone**, using **TypeScript**, **React.js**, and **Solidity**, delivering a seamless decentralized exchange platform with token swap and liquidity pool functionalities
- Integrated and deployed smart contracts using **Solidity** and **Hardhat**, ensuring secure, efficient, and scalable backend logic for DeFi operations..
- Utilized **Web3.js** and **Ethers.js** to connect the frontend with blockchain networks, enabling wallet integration, **real-time token pricing**, and transaction handling.
- Built and enhanced the **Telegram Kasfa bot fork**, extending its features to support secure token swaps and blockchain interactions.
- Developed a production-ready UI for a Telegram-based swap platform, integrating **multi-chain swaps** across EVM chains and the TON Chain with wallet support.

Projects

Token Maker / *Solidity, Node.js, React.js, Hardhat, Ethers.js, Web3.js*

[Link](#)

- Built a decentralized platform to deploy ERC-20 and deflationary tokens with custom parameters using smart contracts.
- Integrated a user-friendly frontend with Web3 and Ethers.js for seamless blockchain interaction and token deployment

Chaufr Coin / *React.js, Tailwind CSS, Solidity, Hardhat, Ethers.js, Web3.js*

- Developed smart contracts for staking, vesting, and pre-sale, tailored to specific client requirements.
- Built the complete frontend and integrated it with smart contracts to deliver a production-ready DeFi platform.

Betting App / *React.js, Node.js, Express.js, Firebase, Bootstrap*

[Link](#)

- Designed and developed a fully responsive frontend from scratch for a decentralized event-based betting platform.
- Integrated Paybroit for secure and seamless payment processing, enhancing the user experience with smooth transactions.

Technologies

Languages : C++ , Java , JavaScript , TypeScript , Solidity

Technologies/Frameworks : HTML/CSS , React.js , Angular.js , Node.js , Express.js , Redux , Ether.js , Web3.js , Wagmi , Firebase , Tailwind CSS

Data Base :MySQL , MongoDB
